

Part B: Password Security Review

1. What makes a strong password?

A strong password is long, unique, and contains a mix of uppercase letters, lowercase letters, numbers, and special characters.

2. Why should passwords be unique?

Unique passwords ensure that if one account is compromised, your other accounts remain secure.

3. What is Multi-Factor Authentication (MFA)?

MFA is a security method that requires two or more forms of verification, such as a password and a code sent to your phone.

4. What are the risks of password reuse?

If one password is stolen, attackers can use it to access your other accounts, leading to data theft and identity theft.

Password Policy:

1. Use at least 12 characters.
2. Include uppercase and lowercase letters.
3. Add numbers and special characters.
4. Avoid personal information (name, birthdate, phone number).
5. Use a unique password for every account.
6. Enable MFA whenever possible.
7. Change passwords immediately if you suspect they have been compromised.
